Pleated Filter Cartridges

Pleated polyester filter cartridges offer a simple, practical means of filtration.

Ease of maintenance, high dirt holding capacities, high flow rates and a low pressure drop provide the lowest cost per litre filtered.

The micron rating of a filter cartridge determines the ability of the filter's media to remove contaminants by the size of particles it is exposed to. For example, a filter that is marked or rated "10 micron" has some capability to capture particles as small as 10 micrometers. Although, the micron rating does not determine the exact efficiency of contaminant holding capability of the filter, it will help you determine which filter is most suitable according to your water supply.

Model #	Length	Diameter	Micron Rating
WFC-FCP-10-01-2.5	10"	2.5"	1
WFC-FCP-10-05-2.5	10"	2.5"	5
